Treatment

Children | Adults | Families | Group

CBH provides therapy for Children, Adolescents, Families, and Adults. CBH clinicians have received advanced training and are highly skilled in a variety of empirically based treatment modalities. CBH clinicians perform a comprehensive intake assessment during the patient's initial sessions and use this information to develop individualized treatment plans.

Evaluations

Children | Adults

Evaluations are completed to assist families, individuals, and school personnel in designing and implementing appropriate treatment interventions.

All evaluations include treatment recommendations to address the abilities and needs of each client. Recommendations may include interventions such as behavioral programs, specialized instructional services, psychotherapy, or medication treatment needs.
